I-EMAS

security
module

I-EMAS

security
module

I-EMAS is used as an independent security system.

It detects any irregularity in the position of the protected item (kiosk, safe, gaming machine, etc.)

It detects:

- Tilting
- Horizontal movement
- Vibration
- Contact open (i.e. a door)

When the alarm is tripped, I-EMAS sends a text message with a code to a previously programmed phone number or multiple numbers.

POWER SUPPLY: I-EMAS can be connected to an outlet or computer via USB. In the event of a power interruption, the unit is powered by the built-in back-up battery.

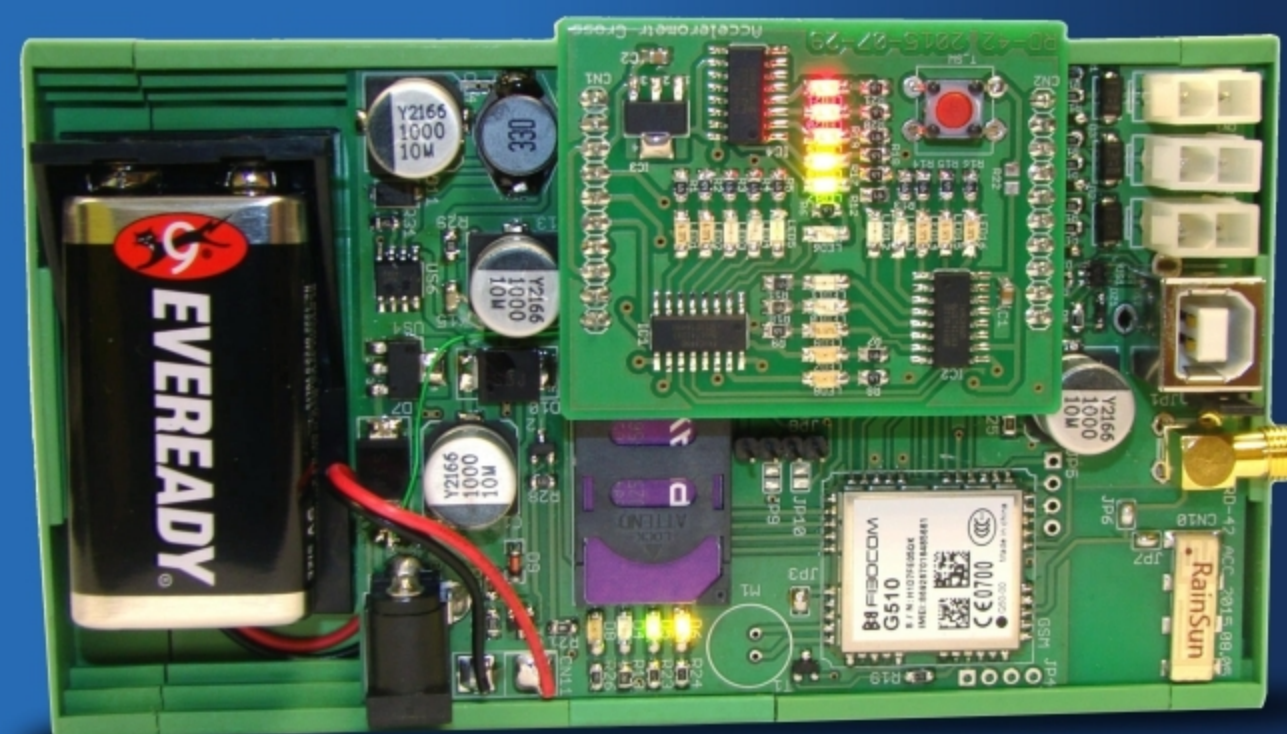

I-EMAS

security
module

I-EMAS can be programmed and calibrated with:

- Computer
- By sending text messages to the unit
- Directly with a button on the unit

Multicolor LEDs indicate I-EMAS status and any errors.
